Drawings

1. Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Allowable Subject Matter

Claims 1-13 allowed.

2. The following is an examiner's statement of reasons for allowance:

There is not found a reference on the record which that teaches using a plurality of laser fiber amplifiers which are used as an input into a solid state laser, where the phase and polarization of the output of the solid state laser are sensed from the output of the solid state laser and where phase and polarization of the output of the solid state laser are controlled.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The most relevant reference considered is Yamaguchi et al. (US 5,369,661) (for simplicity will be called '661). '661 discloses, multiple fibers entering into a single solid state. However the fibers are not "fiber amplifiers" as required by the all the independent claims. '661 also does not meet other limitations listed in the claims.

The next most relevant reference considered is Brignon et al. (WO 2003055016 A2). Brignon discloses using fiber optic amplifiers entering (See abstract) a fiber optic cable (See page 3 line 34, and Wordreference entry for fibre optique). A fiber optic is not an amplifier.

The next most relevant reference considered is Yamaguchi et al. (US 5,513,201) (for simplicity will be called '201). It teaches several laser stripes to pump a single "solid state laser amplifier". However laser stripes are not fibers. '201 also does not meet other limitations of the claim.

The reference Wordreference (<http://www.wordreference.com>) was for French to English translation of key words.
